

Providing Compliance Mounting for Checkouts.

The Taylor ADA Docking Stands are a cardholder-facing Quick-Release mounting system that uses the ADA 309 Operable part U-shape pull handle and the 3.09.4 ADA operations requirements. These are mandatory requirements as a part of ADA compliance; other factors must address ADA limited reach and strength 302.8, PCI-Privacy use, ADA Screen accommodation, Federal and Local Building Code 36.402..

ADA Docking Stands

What is an ADA Docking Stand? The ADA Docking Stand is for credit card terminal mounting. It provides a cardholder-facing quick-release feature so a cardholder can use the credit card terminal privately and one-handed if needed. This allocates PIN entry privacy as required by the ADA and PCI for compliance. It also protects the business accessibility liability, the credit card terminal with lockdown mode, and the cardholders' credit and debit card information. Cashiers are not to touch the card.

The Right Choice

Deep Industry Experience

Beyond the Vail, the ADA Docking Stand is only required at one checkout station or lane, addressing independent accessibility.

Consulting Expertise

Our team is one of the world's best when it comes to ADA compliance. Decades of real world experience and deep know-how with accessibility and the requirements.

Rapid Value Creation

A safe checkout that works for all cardholders is the goal. We have simplified this with our Docking Stands. Simple to install and removes a major liability for the business and the building owner.

For Businesses
